# FSA 750 – **Professional diagnostics system** of the future

## NEW!

- Signal generator for testing sensors when installed!
- Component check

## Vehicle System Analysis FSA 750

### **Combined top technology from Vehicle System Analysis FSA 740 and mobile diagnostics tester KTS 650**

- Combination of high-end solutions for Vehicle System Analysis and control-unit diagnostics
- Synergy effect through additional use of the integrated diagnostics tester KTS 650 as operating, display and computing unit for the Vehicle System Analysis
- Complete system for flexible use in the workshop

### **More reliable troubleshooting**

To locate the defective part exactly, the Vehicle System Test is required in conjunction with the control-unit diagnostics:

- Timesaving test of components when installed (removal/installation of parts from/in the vehicle is unnecessary)
- Menu-guided test steps for effective diagnostics
- Signal generator for simulating sensor signals
- Optimised tuning between SIS troubleshooting instructions, control-unit diagnostics and measuring technology
- Vehicle selection via ESI[tronic]
- High market coverage of all common vehicles
