

What is asanetwork?

asanetwork is the standard communication and exchange of information between Workshop equipment: diagnosis, gas analyzers, brake testers, alignment, oil management, test lines, body repair system ... and Management Systems, DMS ...

asanetwork was born with the support of Equipment Manufacturers, Software and Volkswagen with the objective of a standard communication for the automotive after-sales market, integrating the equipment and systems of the workshop.

asanetwork is present in Germany, Austria, Holland, Japan, Russia, Switzerland ... and since 2011 in Spain and Portugal with B2B-automotive as a distributor.

Key Benefits

- 10-12 minutes per test
- 10 € per test in labor
- 10% oil management
- Data and reports on all computers
- All historical data

Over 65 Manufacturers of Equipment, Software ... and manufacturers like Audi, Volkswagen and Seat are integrated into asanetwork. It is fully integrated with ELSA and Cross, the new Audi-Volkswagen Group and Seat.

It works behind the Management System DMS, connecting the equipment of the workshop. The workshop staff don't need not learn a new program.

Features

The data and test results are exchanged among all the computers in the workshop in real time.

The storage of measurements and test results can have backups, you may see the history in the Management System, DMS.

Control and monitoring of work orders and their status in the network.

Through the internet and / or DMS asanetwork allows the workshop using test results to see the stock of a piece, e-commerce purchase, consult technical information, link to assessment tools ...

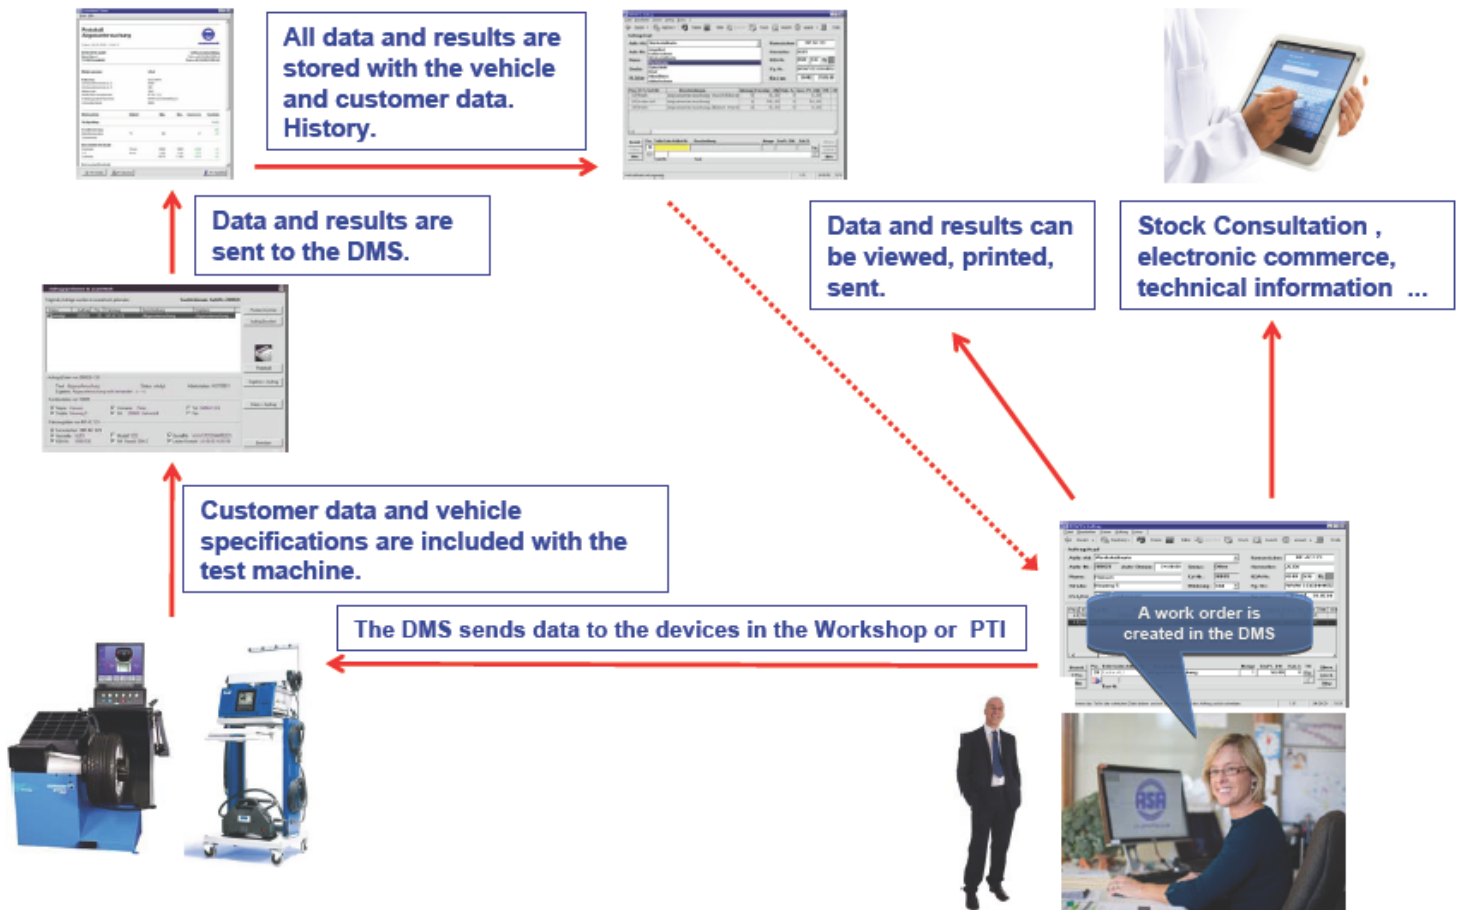

Why asanetwork now?

Workshops cannot manage a multitude of programs, different formats, copy data from one place to another ... They need consistent and shared information.

Over 30% of working time in a workshop is used in non-productive tasks such as walking from one place to another, searching and data entry ... asanetwork greatly improves work management and the organization of the workshop.

The benefits of a workshop cannot be improved by cost savings (price transparency) or sales price; they can only come from the best workflow management and organization...

To view the workflow video click [here](#).

asanetwork lets you use all the resources of the workshop. Mechanics, clerks, service advisors ... from any computer and workshop equipment, through the internet and / or the Management System, DMS, have access to: vehicle data, test data and results, identifying parts, stock parts, electronic commerce, assessment tools, logistics, warehousing, technical information ... printers ...

WORKFLOW

- A new work order is opened by the management system or DMS, indicating the tests to be performed with several workshop equipment, e.g. computer diagnosis, oil transmission.
- The DMS via *asanetwork*, sends information to all workshop equipment involved in the work order.
- The mechanic selects the vehicle for each equipment (testers, lubricants ...), having all the facts and evidence you need.
- After each test *asanetwork* sends all the information from the workshop equipment to computers.
- Results are stored by *asanetwork* in the DMS, to print or view when you want, from any computer in the workshop with access to the historical.
- The mechanic may access from any computer. Being able to see the stock of a piece, e-commerce, see technical information, access to an assessment tool ...
- The clerk and the service advisor have access to the information they can print or send it to the client.

WORKSHOP BENEFITS

- Significant savings of time and organizational improvements.
- Vehicle data and test introduced only once in the DMS. Less data, less errors.
- Increased productivity. The mechanical handles tests on each computer, no need to go for papers, copy data, taking or passing notes ... saving time, lower vehicle identification errors, greater accuracy in testing.
- Management of repairs, information and real time results on all computers in the workshop.
- Follow up work transparently (complete outstanding items ...), control, traceability, quality.
- Technical reports electronically, no paper with a form for each test kit. Consistency, organization, control, better picture.
- Better position for receptionists and service advisors having the vehicle history with its technical reports. Loyalty, professionalism, advice.
- Most equipment are integrated with *asanetwork* Updated by internet for *asanetwork*.
- Due to the cost reduction that *asanetwork* provides, companies reduce their prices if the workshop has *asanetwork*, e.g. in Germany Dekra.

Save around 10-12 minutes per test with *asanetwork*
about 10 euros per test for labour (*)

asanetwork saves 10% of oil (*)
(*) Data from Germany

Testimonial: Mr. Fernando Hernández, IT Director for Grupo Domingo Alonso

"At Domingo Alonso we integrated asanetwork due to its great importance in the marketing of our DMS in central European markets and we understand that, for our daily work in our own dealer network, we will generate significant savings of time and money, service quality improvement and control of workflow. We consider it a must have for today in any workshop that aims improving processes staying ahead of the current technology."

**ASANETWORK WILL PROVIDE A GREAT BENEFIT AND IMPROVE QUALITY OF WORK
BEING A VERY PROFITABLE INVESTMENT IN VERY SHORT TERM, WE INFORM YOU**
